

DEVOPS ROADMAP

Step by Step to Become a DevOps Engineer

Automate. Deploy. Monitor. Improve.
Build reliable systems and deliver value faster.

1

Linux Fundamentals

- Understand Linux OS and distributions
- Basic Commands & Shell Scripting
- File System, Permissions, Processes
- Networking Basics (IP, DNS, Ports)

🕒 1-2 Weeks

OUTCOME

Confident in using Linux for DevOps tasks.

2

Networking Fundamentals

- OSI Model, TCP/IP, IP Addressing
- DNS, HTTP/HTTPS, SSL/TLS
- Load Balancing, Firewalls Basics

🕒 3-5 Days

OUTCOME

Understand how networks work in real environments.

3

Version Control with Git

- Git Basics & Workflow
- Branching, Merging, Rebase
- GitHub / GitLab Essentials

🕒 3-5 Days

OUTCOME

Manage code changes and collaborate effectively.

4

Containers with Docker

- Docker Basics & Architecture
- Images, Containers, Volumes
- Dockerfile, Docker Compose

🕒 1-2 Weeks

OUTCOME

Package applications consistently using containers.

5

CI/CD Pipelines

- CI/CD Concepts & Benefits
- Jenkins / GitHub Actions / GitLab CI
- Build, Test, Deploy Automation

🕒 1-2 Weeks

OUTCOME

Automate build, test and deployment processes.

6

Cloud Basics

- Core Cloud Concepts (AWS / Azure / GCP)
- Compute, Storage, Networking Basics
- IAM, VPC, Security Groups

🕒 1-2 Weeks

OUTCOME

Work with cloud services confidently.

7

Infrastructure as Code (IaC)

- Why IaC?
- Terraform Basics
- Write, Plan, Apply Infrastructure

🕒 1-2 Weeks

OUTCOME

Provision and manage infrastructure as code.

8

Monitoring & Logging

- Monitoring Concepts
- Prometheus & Grafana Basics
- Centralized Logging (ELK Stack Basics)

🕒 1-2 Weeks

OUTCOME

Monitor systems and troubleshoot effectively.

9

Security Best Practices

- System Security Basics
- Secrets Management
- Vulnerability Scanning Basics

🕒 3-5 Days

OUTCOME

Build secure and compliant systems.

10

Capstone Project

- End-to-End DevOps Project
- Automate, Deploy, Monitor
- Document & Optimize

🕒 1-2 Weeks

OUTCOME

Build a real-world project and showcase your skills.

ESSENTIAL TOOLS

PROJECT IDEAS

- ✓ Deploy a web app using Docker & Nginx
- ✓ Setup CI/CD pipeline for a project
- ✓ Infrastructure provisioning with Terraform
- ✓ Monitoring dashboard with Grafana
- ✓ Centralized logging with ELK Stack

SUCCESS TIPS

- ✓ Practice Hands-on Daily
- ✓ Automate Everything
- ✓ Document Your Work
- ✓ Keep Learning & Building
- ✓ Stay Consistent

Keep Learning. Keep Building. Keep Improving.
DevOps is a journey of continuous improvement!
