

MONGODB QUICK CHEATSHEET

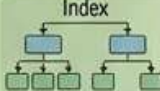

LAST-MINUTE PLACEMENT EXAM REVISION (1-2 MIN SCAN)

BASIC CONCEPTS & DATATYPES

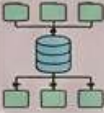

- NoSQL Database Structure (Documents, Collections)
- BSON (Binary JSON) 
- Dynamic Schema (documents with flexible fields)
- Typical Data Types: String, Integer, Boolean, Double, Array, Object, Object, Binary, Date, Timestamp, Null 

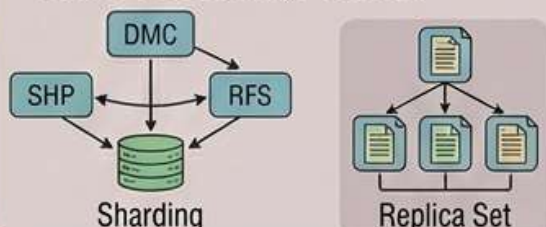

- Purpose: Speed up queries

INDEXES & COLLECTIONS

- Single, Compound, Text, Geospatial Indexes 
- Check all indexes: `db.collection.getIndexes()`
- Collection limits and capped collections

SHARDING, REPLICAS & PERFORMANCE

- Replication for High Availability (Primary, Secondaries) 
- Sharding for Horizontal Scaling (Partitioning)
- Performance: Read Preference, Write Concern, Profiler

BASIC CRUD OPERATIONS

- Insert: `db.collection.insertMany([ doc1, doc2 ])` `find([ doc1, doc2 ])`
- Read: `db.collection.find({ query })`
`db.collection.find({ query })`
- Update: `db.collection.updateMany({ query }, { update })` `React { db.collection.update() }`
- Delete: `db.collection.deleteMany({ query })` `update { query, updateMany({ query }, { update }) }`
- Count, `db.collection.deleteMany({ query })`
- Count, Distinct

AGGREGATION & PROMISES

- Aggregation Pipeline (\$match, \$group, \$sort, \$project)
- Using Mongoose (popular ODM) with Promises/Async/
- Aggregated result visuals 

SECURITY & ACCESSIBILITY

- Authentication (Users, Roles) 
- Authorization (RBAC)
- Encryption at rest and in transit 
- Database-level accessible options
